Document Version Control Record

Learning outcomes

1. Identify user needs and information flows.

2. Develop components of user interface prototypes using Claude Design.

3. Design and validate the user interface design.

4. Document and export the user interface design.

Before you begin

Claude Design is a beta product. Confirm your account access at https://claude.ai/design. Use the included local specimen when access is unavailable. Never enter personal patient data or live credentials in a training project.

Knowledge and ability map

Lab 01 — Clinic Booking Mobile

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

A Singapore clinic needs a mobile flow for appointment search, booking and rescheduling. Patients include older adults with 200% text settings.

Outcome and acceptance

Mobile prototype with search, appointment details, error and confirmation states. 390 px mobile; appointment completion <= 45 seconds; large text and clear recovery.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: 390 px mobile; appointment completion <= 45 seconds; large text and clear recovery.

3. Prompt Claude Design: “Create a clinic booking mobile for CityCare. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, 390 px mobile; appointment completion <= 45 seconds; large text and clear recovery. Keep the final export, source project link if available, and review evidence in this lab folder.

Lab 02 — Responsive Retail Web

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

A local outdoor retailer wants a product discovery and cart flow for desktop and mobile. Stock and delivery promises must be explicit.

Outcome and acceptance

Responsive home, listing, product and cart screens. 1440/768/390 px; card and button variants; keyboard focus.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: 1440/768/390 px; card and button variants; keyboard focus.

3. Prompt Claude Design: “Create a responsive retail web for TrailGoods. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, 1440/768/390 px; card and button variants; keyboard focus. Keep the final export, source project link if available, and review evidence in this lab folder.

Lab 03 — Festival Flyer and Landing Page

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

A community arts festival needs an A5 print flyer and matching mobile landing page for free workshops.

Outcome and acceptance

A5 flyer, QR destination landing page and print proof. 3 mm bleed; 5 mm safe zone; matching event details.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: 3 mm bleed; 5 mm safe zone; matching event details.

3. Prompt Claude Design: “Create a festival flyer and landing page for Neighbourhood Arts Week. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, 3 mm bleed; 5 mm safe zone; matching event details. Keep the final export, source project link if available, and review evidence in this lab folder.

Lab 04 — Programme Brochure

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

An adult-learning provider needs a tri-fold brochure for a short course with fees, schedule and registration details.

Outcome and acceptance

Six-panel tri-fold brochure and accessible PDF review copy. Correct panel order; readable type; factual schedule and contact.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: Correct panel order; readable type; factual schedule and contact.

3. Prompt Claude Design: “Create a programme brochure for Harbour Learning. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or

print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, correct panel order; readable type; factual schedule and contact. Keep the final export, source project link if available, and review evidence in this lab folder.

Lab 05 — Claude Design System

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

The retail brand needs a shared visual language for web and mobile concepts in Claude Design.

Outcome and acceptance

Reviewed token sheet, component variants and test page. Review imported tokens and publish only after comparison.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: Review imported tokens and publish only after comparison.

3. Prompt Claude Design: “Create a claude design system for TrailGoods. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, review imported tokens and publish only after comparison. Keep the final export, source project link if available, and review evidence in this lab folder.

- https://support.claude.com/en/articles/14604397-set-up-your-design-system-in-claude-design

Lab 06 — Validation and Handoff

The detailed, self-contained procedure below is the same procedure in the lab folder.

Client brief

The clinic prototype must be tested on the reschedule task and handed to a developer with clear states.

Outcome and acceptance

Task test log, iteration comparison and handoff package. Five tests; success/time/error rules; export current design.

Materials

- `brief.md` — client constraints

- `assets/content.csv` — approved facts and copy

- `assets/brand.svg` — editable visual asset

- `specimen.html` — local browser preview and fallback

- `review.md` — evidence form

Detailed procedure

1. Open Claude Design at https://claude.ai/design and start a new project. Confirm that your account and plan provide access; if unavailable, use the included HTML specimen to complete the design reasoning and evidence tasks.

2. Read brief.md and assets/content.csv. Write a design brief naming the audience, primary task, required content, device or print size, constraints and acceptance criteria: Five tests; success/time/error rules; export current design.

3. Prompt Claude Design: “Create a validation and handoff for CityCare. Use the attached brief and content. Show task flow, hierarchy, components, states, responsive or print constraints, and a design rationale. Do not invent fees, dates, medical claims or contact details.”

4. Inspect the first draft. Mark each unsupported assumption in review.md. Compare every headline, price, date, action and contact with assets/content.csv.

5. Ask for one focused revision at a time: correct hierarchy, missing error state, contrast, focus order, small-screen layout or print safety. Save before and after evidence.

6. If using a design system, upload the included brand reference, review the extracted palette/type/components, correct mismatches, then test on a sample page before publishing it.

7. Export the current work as PDF or HTML where supported. For print work, inspect panel order, safe margins, image resolution and a PDF proof; for web/mobile, test at the specified viewports.

8. Complete review.md with an evidence table: criterion, observed result, screenshot/file, defect, revision and retest result. Submit the export plus review.md.

Verify and submit

Confirm the deliverable, five tests; success/time/error rules; export current design. Keep the final export, source project link if available, and review evidence in this lab folder.
